Summary

This documentation describes how to implement Klaviyo's cartridge into your Salesforce Commerce Cloud application. The Klaviyo integration features a self-contained cartridge that handles passing events in real-

time from your website to Klaviyo.

The cartridge includes preferences to be configured in the Business Manager and once enabled, contains all elements necessary to perform a successful best practices implementation of Klaviyo.

Events tracked through cartridge:

- Active on Site
- Added to Cart
- Checkout Started
- Order Confirmation
- Site Search
- Viewed Category
- Viewed Product

Component Overview

Functional Overview

The Klaviyo cartridge provides integration for the following functionality:

- Integration of Klaviyo JavaScript library (referenced here: <https://www.klaviyo.com/docs/getting-started>)
- Integration of Klaviyo Server Side library (referenced here: <https://www.klaviyo.com/docs/http-api>) - Cartridge includes a controller to call the Klaviyo Track Server Side API. This is to fire order related events such as Order Confirmation to Klaviyo.
- Klaviyo JavaScript snippet integration and setup – Klaviyo tags can be fired in any page with the help of a modular ISML template and controller integration.
- Klaviyo Subscribe API (optional) – The cartridge also includes a controller to call the Klaviyo Lists API to check for the presence of and subscribe a user to a Klaviyo List. This can be used for functionality such as Newsletters and other forms.

Prerequisites

Before performing the steps in this document, ensure that you and your organization have satisfied the following criteria:

- You have reached out to Klaviyo and have set up a Klaviyo Account (where you can find your Klaviyo Organization ID and API Key, more details below).
- You have downloaded and unzipped the Klaviyo cartridge ZIP file from Salesforce Commerce Cloud Marketplace or your Klaviyo Consultant. The cartridge ZIP file contains the Klaviyo cartridge package residing in the folder int_klaviyo, the preferences configuration XML file, the services configuration XML file, and custom attribute definition file.

Compatibility

The cartridge is designed for Salesforce Commerce Cloud API version 18.8+ for both Site Genesis (SG) and Storefront Reference Architecture (SFRA) (this is the Site Genesis Document), but if you are on older versions please contact us for confirmation, as it should be supported.

Privacy, Payment

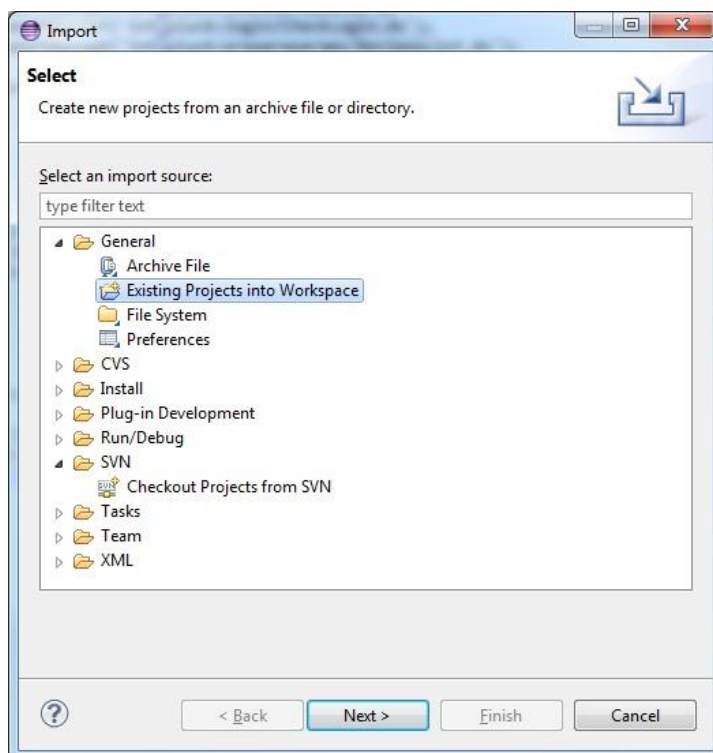

Please see the Klaviyo Privacy Policy here - <https://www.klaviyo.com/privacy>

Contact your account manager for pricing.

Cartridge Implementation Guide

Setup

- Open Salesforce Commerce Cloud Studio.
- Import downloaded cartridge. Select on import screen **int_klaviyo**

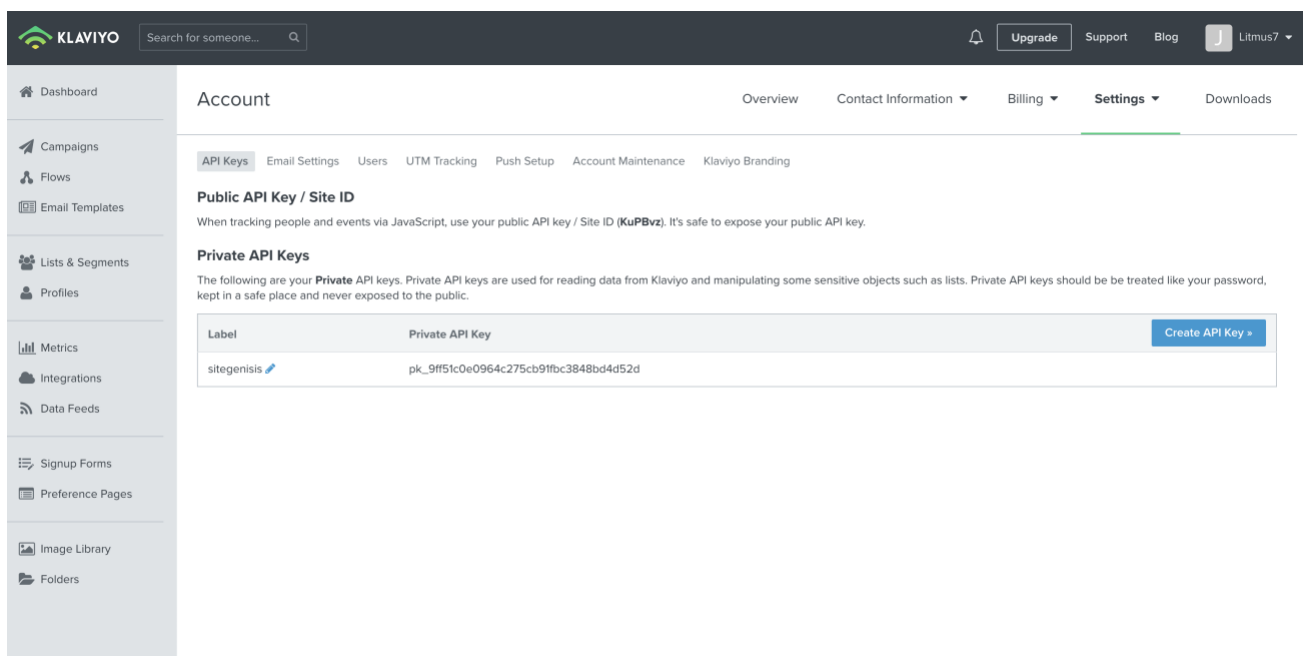

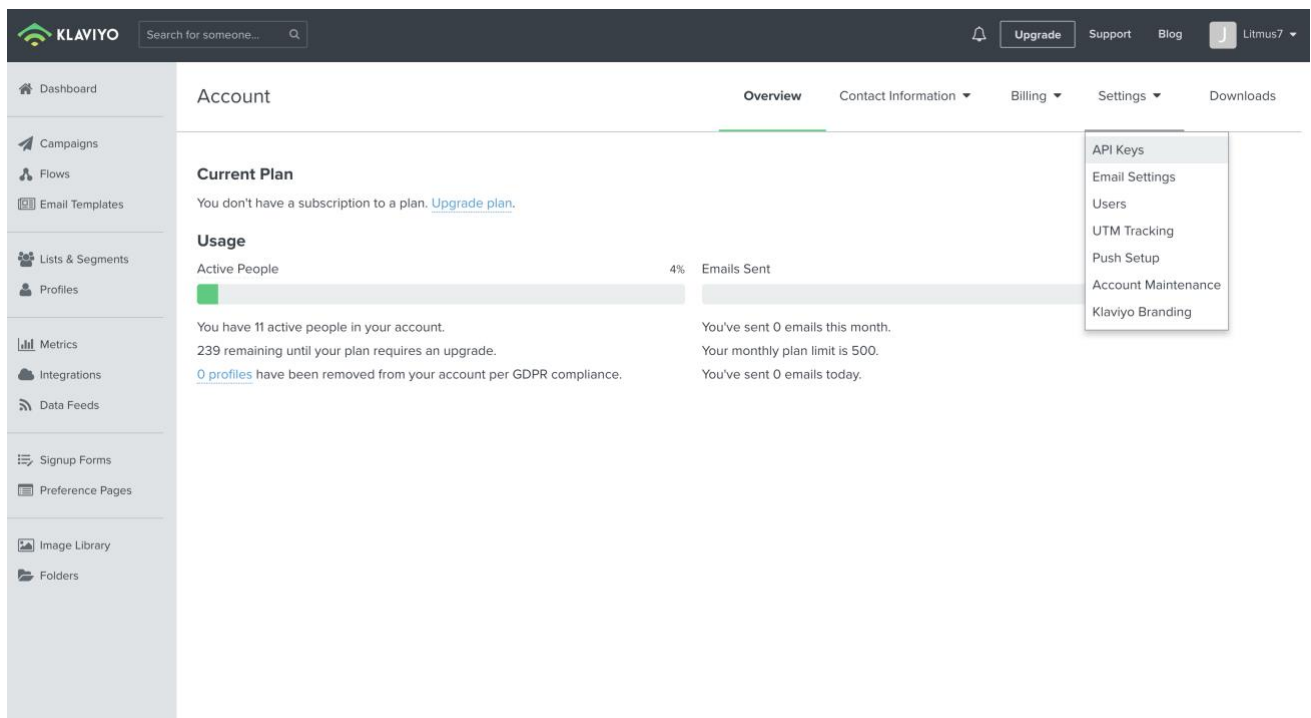

- Link cartridge to the sandbox: Select the Salesforce Commerce Cloud connection and select Properties. Select Project References and check in **int_klaviyo**

Klaviyo Configuration

Once you sign up for your Klaviyo account, you can get your Account ID and API key for setup from your Klaviyo account by following the below steps:

Navigate to the account section by selecting the drop down on the top right. Once in the account page, select the API Keys option under settings to reveal the Account ID and API key.

Business Manager Setup

- Once the cartridge is imported, it needs to be added to the list of cartridges in your site. Go to Business Manager: Administration -> Sites -> Manage Sites. Select your site, then select **Settings** tab. In cartridge path at the end, add **int_klaviyo**.
- Import the services file that come with the cartridge (int_klaviyo\metadata\klaviyo-services.xml). This creates the service definitions for the Klaviyo track and lists server side API. Go to Administration->Operations->Import and Export->Services. Upload and import the klaviyo-services.xml file. This will create one service (two others are optional for the Subscription Service and can be provided upon request):
 - KlaviyoTrackService

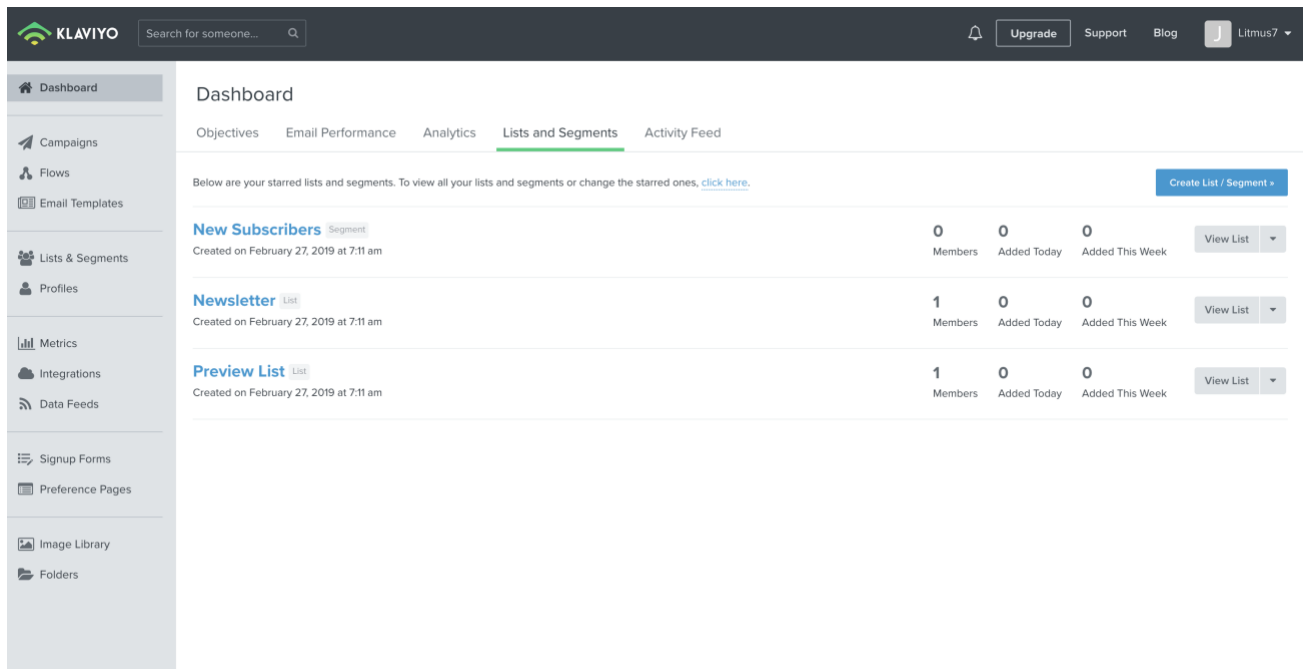

(Optional) For the KlaviyoSubscriptionService and KlaviyoCheckSubscriptionService, replace the ID in the service URL with the Klaviyo List ID that you will be using to subscribe users. For e.g.: the import file will have the service URL as <https://a.klaviyo.com/api/v2/list/Mm2HRr/members>. Replace the section highlighted in blue with your List ID from klaviyo

To get the List ID in Klaviyo, navigate to Lists and Segments in the Dashboard section.

Item	Type	Created	Members	Added Today	Added This Week	Action
New Subscribers	Segment	Created on February 27, 2019 at 7:11 am	0	0	0	View List
Newsletter	List	Created on February 27, 2019 at 7:11 am	1	0	0	View List
Preview List	List	Created on February 27, 2019 at 7:11 am	1	0	0	View List

Select the List you want and the URL will contain the List ID.

- Import the meta-data file (int_klaviyo\metadata\custom_attribute_klaviyo.xml). This creates site level custom attributes for storing the Klaviyo account ID and API Key. To import, navigate to Merchant Tools > Administration > Site Development->Import and Export. Under the meta data section, upload and import the custom_attribute_klaviyo.xml file. This creates the following attributes in Site Preferences:
 - Klaviyo Account - This is mandatory and used to authenticate to the Javascript API.
 - Klaviyo API Key - The private API key for the server side API.
 - Klaviyo Enabled – To Enable the Klaviyo Service
 - Image type for Klaviyo – The image size you use for products ('hi-res', 'large', etc.)

Custom Code

- Add the following code to your footer_UI.isml file:

```
<isinclude url="{URLUtils.url('Klaviyo-RenderKlaviyo',
'title', request.pageMetaData.title,
'pagecontexttype', ('pageContext' in this && !empty(pageContext)) ? '+pageContext.type : null,
'pagecontexttitle', ('pageContext' in this && !empty(pageContext)) ? '+pageContext.title : null, 'searchterm',
request.httpParameterMap.q.stringValue,
'searchresultscount', (!empty(pdct.ProductSearchResult) ? '+pdct.ProductSearchResult.count : null),
'productid', (!empty(pdct.Product) ? pdct.Product.ID : null),
'pagecgid', request.httpParameterMap.cgid.stringValue,
'orderno', (!empty(pdct.Order) ? pdct.Order.orderNo : null)
)}" />
```

- Import Add the following code to your cart templates for adding and editing items in the cart:

```
<isif condition="{pdict.CurrentHttpParameterMap.cartAction == 'add' ||
pdict.CurrentHttpParameterMap.cartAction == 'update'}">
  <isinclude url="{URLUtils.url('Klaviyo-RenderKlaviyoAddToCart')}" />
</isif>
```

include this script after the includes for [jquery-1.11.1.min.js](#) & [jquery-ui.min.js](#)

- Add the following code to the end of your footer_UI.isml file:

```
<isinclude
url="{URLUtils.url('Klaviyo-RenderKlaviyo',
  'title', request.pageMetaData.title,
  'pagecontexttype', ('pageContext' in this && !empty(pageContext)) ? "+pageContext.type : null,
  'pagecontexttitle', ('pageContext' in this && !empty(pageContext)) ? "+pageContext.title : null,
  'searchterm', request.httpParameterMap.q.stringValue,
  'searchresultscount', (!empty(pdikt.ProductSearchResult) ? "+pdikt.ProductSearchResult.count : null),
  'productid', (!empty(pdikt.Product) ? pdikt.Product.ID : null),
  'pagecgid', request.httpParameterMap.cgid.stringValue,
  'orderno', (!empty(pdikt.Order) ? pdikt.Order.orderNo : null)
)}" />
```

- Change the storefront controllers cartridge name to your cartridge name wherever referenced in the Klaviyo.js and EmailUtils.js files (depending on your site's customization, be careful to check other references if you are overwriting core cartridges)

For e.g.: in line 5 of the Klaviyo.js file, replace the app_controllers with your controller cartridge name.

External Interfaces

All calls are made from tracking and identification on the pages are done through the Javascript Track and Identify calls which can be referenced in <https://www.klaviyo.com/docs/getting-started>.

For the server side calls pertaining to List Subscription and Track call for order confirmation, please refer <https://www.klaviyo.com/docs/http-api> and <https://www.klaviyo.com/docs/api/v2/lists> .

Firewall Requirements

N/A

Testing

Login to Klaviyo and go to <https://www.klaviyo.com/dashboard>

To see the service in action, login to the storefront and cookie yourself by adding **“utm_email=test@test.com”** test the user activities such as viewed product, add to cart, active on site, search, order placed to see the events come through to Klaviyo.

Click on the Activity Feed to see all the activities and events tracked like Viewed Product, Add to Cart, Checkout Started , Subscribed to list etc..

Business Manager

Please refer the Business Manager Section above for setup related information. There is no other Business Manager setup required other than the initial configuration stated in that section.

Storefront Functionality

The storefront integration will invoke the following events and tracking for the following functionality:

- Added to Cart – Event fired when user adds/modifies his/her cart
- Checkout Started – Event fired when user initiates the checkout process
- Order Confirmation – Event fired when the user places his/her order, useful for real-time receipts
- Site Search – Event fired when a user initiates a search.
- Viewed Category – Event fired when a user views a category page.

- Viewed Product – Event fired when a user views a product page. The information regarding the viewed product is passed along to Klaviyo here.

In addition to this, the add to list functionality is triggered when a customer subscribes to Newsletter via the footer.

User details also get passed to Klaviyo via the Track API when a user logs in or registers via the storefront.
